Appendix C:

Bibliography of Infrared Astronomy

(Chronological Order)

The *Bibliography of Infrared Astronomy* links observations in the Catalog with the original articles published in the astronomical literature. Approximately 4100 journal articles and other references are listed in this Appendix. The Bibliography is arranged chronologically by reference number in this Appendix (and alphabetically by first author in Appendix B). It contains the authors' names, journal name or document number, volume, page, and full title.

The bibliographic reference number is made up of the year and month of publication, and a sequential number assigned to the article (for example "790104" is broken down into 79-01-04, where 79 = 1979, 01 = January, and 04 = article #4 in that month).

References used in the data base, but not containing infrared information, have an "89" or "99" as the month of publication. An "89" means that the reference was published in the 1800s. References which do not indicate the month of publication have "00" in the month field.

Appendix D:

Index of Infrared Source Positions

The *Index of Infrared Source Positions* is a listing of infrared sources, arranged alphabetically by source name. After locating the source in this index, its position can be used to quickly find data in the main Catalog. If the source position was not given by the original authors (which is true in a large number of cases, primarily well-known visible sources), a supplementary position was obtained by the editors from visible star catalogs, from references listed in the Bibliography column (see abbreviations below), or the source position had to be determined by the editors from source maps or other non-tabular material in the article. Positions not given by the original authors appear here in italics. The nominal positions are the best available, but in a few cases, may not coincide with the true infrared positions. Sources without published positions appear in alphabetical order with the other names with blanks in the position column.

Supplementary positions frequently shown in the *Index of Infrared Source Positions* have been obtained from:

REPORT DOCUMENTATION PAGE			Form Approved OMB No. 0704-0188	
Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

13. ABSTRACT (Maximum 200 words) The Far Infrared Supplement contains a subset of the data in the full Catalog of Infrared Observations (all observations at wavelengths greater than 4.6 microns). The Catalog of Infrared Observations (CIO), NASA RP-1294, is a compilation of infrared astronomical observational data obtained from an extensive literature search of scientific journals and major astronomical catalogs and surveys. The literature search is complete for years 1965 through 1990 in this Third Edition. The Catalog contains about 210,000 observations of roughly 20,000 individual sources, and supporting appendices. The expanded Third Edition contains coded IRAS 4-band data for all CIO sources detected by IRAS. The appendices include an atlas of infrared source positions (also included in this volume), two bibliographies of Catalog listings, and an atlas of infrared spectral ranges. The complete CIO database is available to qualified users in printed, microfiche, and magnetic-tape formats.
